

Radiogram

Available on [Google Play](#) and [Amazon Appstore](#)

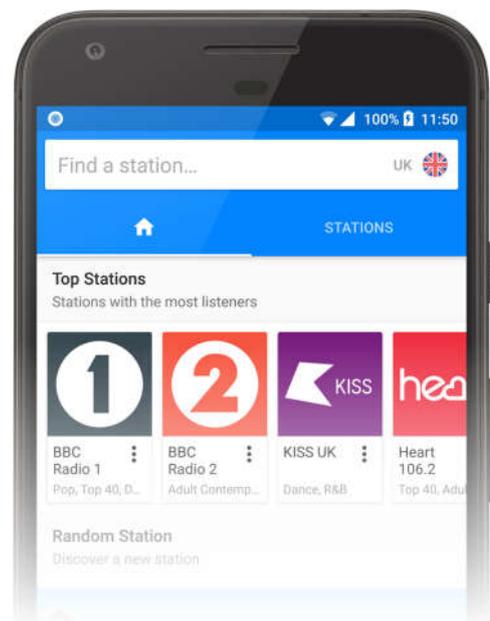

What

Radiogram is an Android app which allows you to listen to radio stations on your smartphone or tablet device. Thousands of stations from many different countries are available to tune into with more being continually added. No aerial is required, only an active internet connection.

Nobody likes annoying adverts...

Why

Radiogram was developed to fix a problem plagued by other radio apps - annoying and intrusive adverts. A radio app should do one thing well, that is to play a radio station when the user asks, it shouldn't make a user watch a video or view a full screen advert each time a station is played.

Radiogram has no annoying adverts, simply find a station and start listening!

Features

Having an app with no annoying adverts is great but it also needs to perform - this is where Radiogram excel's. Built from scratch, Radiogram utilises modern audio libraries for reliable music playback and features an interface which adheres to Google's *material design* principles. Intuitive and efficient, Radiogram is an app which everyone can use and enjoy.

An overview of the app features:

- Free to download with no annoying adverts
- Intuitive, beautiful interface
- Small download and FAST loading times
- Carry around thousands of radio stations in your pocket
- Supports Chromecast for listening to radio on your TV or other cast devices
- Browse by genre or search for a station by name or location
